## Subject Index

### A
- Adipocyte lipid, 92
- Adolescent growth spurt, 123
- Adrenal androgen, 116
- Adult size, 58
- Age, 35
- Age group, 35
- Alcohol, 108
- Anemia, 106–107
- Anorexia
  - etiology, 148
  - zinc deficiency, 148
- Anorexia nervosa, 122
- Anthropometric variables, socio-economic status, 60–61
- Anthropometry, 226–229
- Antipoverty program, 276
- Asian population
  - child size, 64
  - genetic influence, 75–85
  - early growth characteristics, 85
  - linear growth velocity, 87
- Aspirin, 100

### B
- Bangladesh, 37, 245
- Beta blocker, 100
- Beta sympathomimetic, 100
- Birth weight
  - environmental factors, 91, 92
  - genetic factors, 91, 92
- Black, 65–66
- Bladder stone disease, 136
- Body composition, 226–229
- Body mass index, 89, 90
- Body segment, differential growth, 88
- Body size, 1
  - adult, 217–225
  - children, 225–229
  - composition, 229–230
  - endurance, 222–223
  - productivity, 223–225
  - work capacity, 215–243
  - work performance, 235
- Bone growth, calcium deficiency, 128–130
- Bone loss, 138–139
- Brain, work hypertrophy, 212
- Breast feeding, 4–5, 12, 13, 277
  - United States, 64
- Bunching, 52
- Bushman, 89

### C
- Calcium
  - animal studies, 129–130
  - dietary, availability, 131–132
  - human studies, 129
  - low calcium diet adaptation, 130–131
  - malnourished child, 135
  - measurement, 135–136
  - phosphorus, 138
  - protein, 139
  - vitamin D deficiency, 136
- Calcium deficiency, vitamin D, 132–133
- Calcium homeostasis, 127–128
- Case-control study, 198
- Catch-up, 8–10
  - genetic influences, 77–78
  - malnourished infant, 9–10
Catch-up (contd.)
protein deficiency, 151-153
zinc deficiency, 151-153
Celiac disease, 123,124
Cell replication, 93
Chile, weight for height, 182
Chinese population, child size, 64,67
Chuliban Longitudinal Study, 168-170
Climate, 89
Cohort study, 198
Colombia, national nutrition surveys, 27,28
Composition, body size, 229-230
Conception, seasonality, 107
Cooking smoke, 99-100,108
Copper, 150
Copper deficiency, 163
Cortisol, 119
Cross-sectional data, 17-24
Cross-sectional study, 166

D
Data quality, 35,179
Dendrite, 210
Desmosine formation, 163
Developed country, 79
Developing country, 79
child size, 62-64
Diarrhea
duration
stunting, 195-199
wasting, 195-199
etiology, 196
linear growth, 26
Down's syndrome, 76
genetics, 91
Dutch famine, 1944-1945, 107-108

E
Egypt, 79-80
Endurance, body size, 222-223
Energy deficiency growth failure, 146
Energy expenditure, 240
Environment
mental development, 201
socioeconomic status, 66-67
Epidermal growth factor, 93
Epiphysis, 75
Eskimo, 89
Essential fatty acid, 161
Estradiol, 116
Ethnicity
growth, 12-13
height, 12-13
linear growth, 176
physical size diversity, 78-79
velocity measurement, 12-13
Europe, 58
secular trend, 70

F
Fetal growth, 76-77,92-96
altitude, 101
caloric requirements, 99
control, 95
first trimester, 92
genetics, 91
maternal alcohol ingestion, 99-100
maternal disease, 101
maternal drug use, 100
maternal influences, 98-101
second trimester, 92
smoking, 101
socioeconomic status, 99
third trimester, 92
uterine shape and size, 98-99
velocity, 92
Fetus, nutrient, 92-96
Fibroblast growth factor, 93
Folic acid supplementation, 106-107
Follow-up duration, 261
Food groups, dietary energy supplied, 32
Formula feeding, 12,13
misuse of commercial, 278
United States, 64
SUBJECT INDEX

G
Genetics, 75-85
  Down's syndrome, 91
  fetal growth, 91
  stature, 57-68
  timing, 76-78
  Turner's syndrome, 91
Geographical distribution, 171
Gestational age, 106
Glucocorticoid, 100, 115
Gonadal steroid, 116
Great Britain
  infant mortality, 70
  19th-century, 58
  stunting, 70
Growth
  catch-up, 8-10
  early childhood, genetic influences, 75-85
  endocrine control, 109-120
  ethnicity, 12-13
  seasonal variations, 8
  somatomedin, 114-115
  in utero determinants, 91-101
Growth curve, 75
  Asia, 85
  boys, 76
  girls, 76
Growth failure
  energy deficiency, 146
  physiological, 78
  protein, 146
  zinc, 146
Growth hormone,
  93, 109-113, 117-118
  clinical assessment, 112
  deficiency, 112-113
  secretion control, 109-111
  age, 111-112
  puberty, 111-112
Growth hormone model, 13
Growth hormone-releasing factor, 109-111
Growth monitoring
  data analysis, 42-45
  increment centiles, 45-47
  length measurement, 41-50
  screening increment standard, 47-50
  slowing detection probability, 51-52
  socioeconomic factors, 52
  study population numbers, 54
Growth pattern, 53
Growth plate, 75
Growth potential, 68
  genetic factors, 35
  standard, 17
Growth retardation, 2
  future research, 279
Growth shift, 77
Growth standards, 79-84
  Asia, 80
  Europe, 79-80
  North America, 79-80
Growth velocity, 2, 92
  Guatemala, Hispanic, 66

H
Haiti, 79-80
HANES I, 65
HANES II, 65
Head circumference, 211-212
  secular trend, 73
Health care outreach, 278
Height
  catch-up, 8-10
  ethnicity, 12-13
  house quality, 60-61
  lean tissue mass, 182
Height velocity, 2, 53
Heterosis, 59
Hispanic, 65-66
  Guatemala, 66
Holland, alternative diets, 32
Honduras, 60-62
Hong Kong, 80–85
Housing, 72
    height, 60–61
Human placental lactogen, 95–96
Hybrid vigor, 59
Hypothyroidism, 125

I
Immune defense system, 186–187
Income, Sri Lanka, 71
India, 266–268
Industrialized country, child size, 62–64
Infancy, length measurement, 41–50
Infant
    formula fed, 4–5
    low birth weight, 5, 6
    normal birth weight, 5, 6
    small-for-date, 5
    stunting, 3
Infant mortality
    Great Britain, 70
    Sri Lanka, 71
    stunting, 33, 36
Infection
    analysis, 185–186
    cofactors, 192–193
    duration, 189–191
    incidence, 188–189
        risk factors, 188–189
    linear growth, 176–178
    severity, 189
    socioeconomic status, 195–196
    stunting, 25–27
    zinc, 162
Inositol hexaphosphate, 157
Insulin, 92–93, 115, 119
    protein, 13
Insulin-like growth factor I, 94–96
Intrauterine growth retardation, 15, 105–106
Iodine deficiency, 124–125
Iron supplementation, 106–107
Isoxuprine, 100

J
Jamaica, 84
    somatomedin C, 122
Japan, 58, 80–85
    secular trend, 88
Japanese population, child size, 64, 67
Jordan, 281

K
Kasongo study, 245
Kerala, India, longitudinal study, 30, 31
KCHARDEP Impact Studies, 168–170
    stunting, 181
Knemometry, 53
Korea, 80–85

L
Lactogen, 93, 95–96
Lag-down, genetic influences, 77–78
Lean body mass, 215
Leg growth, 88
Length increment, 41–50
    centiles, 45–47
    data analysis, 42–45
    successive intercorrelation, 48–49
Length measurement
    4-week interval, 41–50, 53–54
    growth monitoring, 41–50
    infancy, 41–50
    interval between, 49, 53–54
    screening, 47–50
    study population numbers, 54
Linear growth
    associated variables, 170–177
    diarrheal infection, 26
    early childhood, 75–85
    ethnicity, 176
genetic factors, 75–85
geographical distribution, 171
infection, 176–178
measurement, 14
  ethnic differences, 14
  faltering, 14
as monitor, 257–259
patterns, 165–170
seasonality, 171–173
sex, 171
significance, 7
socioeconomic status, 173–176
variability, 7–8
Linear growth retardation, mortality, 245–264
Linear growth velocity, Asian population, 87
Literacy, 71
Load carrying, energy cost, 230–233
Longitudinal study, 167
Low birth weight
  catch-up, 15
  maternal stunting, 271–273
socioeconomic status, 105
Thailand, 72
Low weight for length, 15
Lysyl oxidase activity, 163

M
Macrobiotic diet, 32
Malnutrition, 218–222
cofactors, 192–193
definitions, 1,216
mental development, 210–213
prevalence, 1
recovery, 181
risk factors analysis, 185–186
stature, 57–68
stunting, 25
submaximal work efficiency, 233–235
Thailand, 72
Manganese, 150
Maternal height, mortality, 261
Maternal malnutrition, 36
Maternal nutrition, 276–277
Maternal physical work, 105,106
Maternal placental perfusion, 105,106
Maternal rest, 105
Maternal stunting, low birth weight, 271–273
Matlab Bangladesh, 180
Maturation, delayed, 10
Measles, 25,197
Mechanical efficiency, defined, 217
Menarche, 58,123
Mental development
  environment, 201
  infant to 2 years, 202–203
malnutrition, 210–213
  preschool age, 203–205
psychomotor development, 210
  school-age, 205–208
stunting, 201–209
Milk-based supplement, 153
Mineral nutrition, 157–158
Monitoring, 278
Morbidity, risk factors analysis, 185–186
Mortality
  causes, 263–264
  infection, 191–192
linear growth retardation, 245–264
  maternal height, 261
New Guinea, 260–261
stunting, 245–264
causality, 256–257
Multiplication-stimulating activity, 94
Muscle cell mass, 218

N
National Center for Health Statistics, 79
Nepal, 165–178
Nerve growth factor, 93
New Guinea, 161
  mortality, 260–261
Nitrogen, 145–146
North America, 58
  child size, 64–66
Nutrient, body store, 144
Nutrient deficiency, 143–158
  types, 143–144
Nutrient supplementation, 107
Nutrition, endocrine adaptation, 117–120
Nutritional deficiency
  Type I, 145
  Type II, 145–149
Nutritional factors, 1
Nutritional growth retardation, 127–133

O
Oral rehydration therapy, 196–197
Osteoporosis, 138–139

P
Parasite, 180
Parturition, 125
Paternal malnutrition, 36
Peptide growth factor, 92–93
Phosphate deficiency
  stunting, 137
  Thailand, 137
Phosphorus, 145–146
  calcium, 138
Physical fitness, definitions, 216
Physical work capacity, definitions, 216
Phytic acid, 157
Placenta, 96–98
  amino acid transport, 98
  blood flow, 96, 97
  human placental lactogen production, 96
  morphological abnormalities, 96
  nutrient delivery, 97–98
  peptide growth factor, 93
  steroid hormone metabolism, 96
  umbilical cord abnormalities, 96–97
Plasma phosphate, 136
Population density, 36
Potassium, 145–146
Potassium supplementation, 157
Poverty, 268–269
  factors, 265
  previous generations, 64
  stature, 57–68
  correlation coefficient, 70–71
  regressions, 70
  variance, 71
Thailand, 72
United States, 65–66
  Blacks, 65–66
  Europeans of non-Hispanic origin, 65–66
  Hispanics, 65–66
Poverty syndrome, 282
Prematurity, 5, 15
  growth factors, 125
Productivity, body size, 223–225
Propranolol, 100–101
Protein, 153–155
  calcium, 139
  growth failure, 146
  insulin, 13
Protein deficiency, catch-up, 151–153
Protein-calorie malnutrition, 182
Protein-energy malnutrition, 26, 185–187
Psychomotor development, mental development, 210
Pubertal growth spurt, 10

R
Racial group, physical size diversity, 78–79
Reference population
  age distribution, 18–24
