prediction of subsequent food intake 191
slow wave sleep adjustments 193, 194, 197, 198
thermoregulation 191, 192
tryptophan effects 198
malnutrition effects 41
stages of sleep 189
Slow wave sleep, see Sleep-wake cycle
Stroke
CARDIAC study
beneficial nutrients 236, 237, 239, 244
blood pressure measurement 236
fiber effects 245
salt excretion and stroke mortality 237, 239, 244, 245
serum cholesterol levels 237–239
urine sampling 234, 236
worldwide survey 234
Japanese trends 231, 232
nutritional prevention 241, 242
oxidative stress hypothesis
animal studies 240
apoptosis 240
gene expression 240, 241
vitamin E protection 240
prevention 264
rat models
blood-brain barrier changes 244
diet studies 234
genesis in salt-induced blood pressure elevation 233, 234
overview 231, 232
salt restriction 233
salt sensitivity variability 246
vascular anatomy 232
Subject Index

Stroke (continued)
vascular smooth muscle cell
maintenance and degeneration
232, 233

Taurine, deficiency and central nervous
system development 42

Thyroid hormone
brain development
animal models 49, 50
cerebellar actions 50
ethanol effects 52
gene regulation 51
iodothyronine deiodinase activity
coordination 51
myelination mediation 52
neurofilament gene expression
50
receptors 49, 51, 52
role 48, 49
iodine deficiency and mental
retardation 48, 49, 70
metabolism of forms 51

Tryptamine, synthesis in brain 13

Tryptophan
aging effects on levels 151, 152
catabolism 132
depletion testing 149
depression studies
bulimia nervosa and tryptophan
depletion 137
dietary tryptophan effects on
serotonin synthesis 136, 137
seasonal affective disorder and
tryptophan depletion 137
dietary effects on brain levels and
serotonin synthesis 123, 125,
143–145
eating disorder levels 158–160
hepatic encephalopathy levels 287
sleep effects 198
transport in brain 150, 151

Tyrosine
catabolism 132
depletion in depression 18
dietary effects on brain levels and
catecholamine synthesis 127,
128, 143–145
oral contraceptive effects on levels
140, 141

Undernutrition, see Malnutrition

Uremic encephalopathy
clinical features 291, 292
nutritional therapy 293, 294
parathyroid hormone concentrations
292
transmembrane ion transport defects
292, 293
urea accumulation 292

Vascular smooth muscle cell,
maintenance and degeneration in
stroke 232, 233

Visual evoked potentials
docosahexaenoic acid
supplementation effects 58
iron deficiency anemia effects 24,
25, 29

Vitamin B₆, see Pyridoxal phosphate

Vitamin B₁₂
deficiency in aging
cognitive dysfunction studies
204–209
homocysteine as marker 210,
214, 215
intervention 211
prevalence 203
neurological manifestations of
deficiency 201, 202
one-carbon metabolism and brain
function 204, 210
supplementation 214, 215

Vitamin E
Alzheimer disease trials 222, 223,
230, 266, 277, 279
stroke protection 240

Wilson disease, copper metabolism
defects 250, 251, 261

Zinc, toxicity 262
