Subject Index

Anthropometry, undernutrition studies 106, 107
Appetite, micronutrient intake effect, weaning period 84, 99, 100
Ascorbic acid-iron interactions 71, 72, 80

Bone
  calcium/phosphorus status
    linear growth relationship 160
    mineralization studies 160–163
    overview 159, 160
copper effects 168
density measurements 153–155
developmental parameters 153
early diet effects, long-term bone health 163, 164, 169
exercise effects 166, 167
micronutrient supplementation studies 170, 171
vitamin D status
  linear growth relationship 156, 157, 164
  mineralization studies 157–159
  overview 155, 156
zinc effects 166, 167

Breast milk
  adequacy during 1st year of life, complementary food rationale 83, 84, 203, 213, 263, 264
  iron content 263, 264
  vitamin D content 23, 32, 156, 266

Calcium
  bone effects
    linear growth relationship 160
    mineralization studies 160–163
    overview 159, 160
deficiency
  phytic acid/dietary calcium
    bioavailability 27, 33, 34
  prevalence 27, 28, 34
  rickets 26, 27, 29, 30, 34
dietary sources 26
  excretion 30
  recommended dietary intakes 25, 26
  stable isotope studies
    absorption, cystic fibrosis 54, 55
    calcium-41 features 65
  supplementation, pregnancy 33

Calcium-iron interactions 19, 20, 228–230

β-Carotene
  bioavailability, weaning period 91
  immune function studies 151, 152

Complementary foods
  calcium content 99
  dietary diversity 87
  dietary inadequacies, micronutrient deficiencies 93–96
  fortification
    affordability 209–211
    barriers
      overview 204
Complementary foods (continued)
fortification (continued)
barriers (continued)
production side barriers 215, 216, 232
reaching the most needy 216, 217
efficacy trials, developing countries 220, 221
food industry globalism 210
Nutrisano case study, Mexico
efficacy, infant micronutrient status improvement 219
iron bioavailability/stability/acceptability 219, 222, 223, 226, 227
nutrient content 222
Oportunidades program 219, 231
weaning practices 228, 229
perceptions 204, 205
program development 205–210, 223
rationale 203, 214, 215
research prospects 224
targeted fortification
developed countries 218, 229–231
developing countries 218, 219, 231, 232
universal versus targeted fortification 217
iron-calcium interactions 228–230
micronutrients
bioavailability 87–91
inadequacies 214
nutritional adequacy evaluation,
comparison with World Health Organization recommendations 91–93
recommendations 96, 97, 203, 224
Copper
bone effects 168
deficiency
features 43
prevalence 43
Copper-iron interactions 70, 71, 78
C-reactive protein (CRP), infection marker 182–184
Delivery, micronutrient deficiency eradication
core business engagement 255
overview 254, 255
philanthropy 256
supportive partnerships 255
Diarrhea
micronutrient losses 177, 179, 181
oral rehydration solutions 181, 182
zinc supplementation 267
Dietary diversity, micronutrient intake
effect, weaning period 86, 87
Economic impact, micronutrient deficiencies
folate deficiency 190–192
iodine deficiency 192, 193
iron deficiency 193–196, 201
mechanisms
cognition 189
morbidity 189, 199
mortality 189, 190, 198, 199, 202
productivity 188, 189
overview 187, 188
policy implications 196
research prospects 197
study design 198, 200
Energy density, micronutrient intake
effect, weaning period 85, 99, 100
Exercise, bone effects 166, 167
Famine
causes 106
frequency 106
Feeding frequency, micronutrient intake
effect, weaning period 85
Folate deficiency, economic impact 190–192
Food variety, micronutrient intake
effect, weaning period 85
Gastric pH, malnutrition effects 243, 244
Helminthiasis, micronutrient status 183
Hemoglobin
infant/toddler levels 16, 17
undernutrition surveillance 112
Immune function
adaptive versus innate immunity 139
infants 139
micronutrient effects, see Iron;
Vitamin A; Zinc
micronutrient studies, historical,
background 138, 139
Iodine deficiency
economic impact 192, 193
epidemiology, iron/vitamin A deficiencies 2, 4, 5, 15, 17
features 46
goiter 46
micronutrient studies, history 250
scoring 37, 38
immune function studies 146
Iron absorption, infants 226, 227, 231, 243, 244
bioavailability/deficiency 1, 2, 87–89
deficiency, see also Iron deficiency anemia
developmental study design 131–133, 135
disease association 40, 177
economic impact 193–196, 201
epidemiology, iodine/vitamin A deficiencies 2, 4, 5, 15, 17
mental development 120, 121, 130, 131
motor development 122
risk factors 233
scoring 37, 38
sensory development 123
sleep/wake cycle effects 123
social/emotional development 121, 122, 135
spontaneous motor activity effects 122, 123
undernourished infants/toddlers 123, 124
dietary requirements 233
immune function studies
controlled studies 145
deficiency effects 144, 146
historical perspective 138, 139
supplementation effects 146
Nutrisano bioavailability,
stability/acceptability 219, 222, 223, 226, 227
stable isotope studies, absorption,
fortified foods 54, 62, 63
status assessment 119
supplementation
anemia prevention 235, 236
effects on malaria 151, 245, 248
home fortification, see Sprinkles
iron drops/syrup 236
weaning intake 102, 103
Iron-ascorbic acid interactions 71, 72, 80
Iron-calcium interactions 19, 20, 228–230
Iron-copper interactions 70, 71, 78
Iron deficiency anemia (IDA)
etiology 240
prevalence 1, 15, 38
prevention, infants
dietary diversification/modification 234, 235
home fortification, see Sprinkles
iron supplementation 235, 236
targeted iron fortification 235
vitamin A status effects 2, 3
Iron-iodine interactions
cross-sectional studies 9
intervention studies 10, 11
mechanisms 9, 10
overview 8, 9, 74, 75
Iron-iodine interactions
cross-sectional studies 9
intervention studies 10, 11
mechanisms 9, 10
overview 8, 9, 74, 75
Iron-riboflavin interactions 74
Iron-vitamin A interactions
intervention studies 8
iron absorption 6, 7
iron metabolism 3, 6
overview 72, 73
Iron-zinc interactions 49, 50, 67–70, 78–80
Isotope micronutrient research
body pools 64, 65
calcium absorption, cystic fibrosis 54, 55
calcium-41 features 65
costs/funding 59, 61, 62, 65
erthyrocyte iron incorporation 62
Subject Index

Isotope micronutrient research
(continued)
intrinsic versus extrinsic labels 64
iron/zinc absorption, fortified foods 54, 62, 63
isotope purchasing guidelines 57, 58, 60
magnesium metabolism kinetics 55–57
safety 57, 61
sample collection 61, 66
steady state considerations 63
study design 58, 59
zinc, body compartments 176, 177, 180, 181

Kwashiorkor, definition 106

Lead, confounding factor, micronutrient deficiency studies 133, 134

Magnesium, stable isotope studies, metabolism kinetics 55–57
Malaria, iron supplementation effects 151, 245, 248
Marasmus, definition 106
Meat, iron/zinc absorption enhancement, weanlings 89, 101, 102
Minimal change nephrotic syndrome, zinc, prevention 149, 150

Non-government organizations (NGOs), micronutrient fortification 117, 118
Nutrisano, see Complementary foods

Oral rehydration solutions
diarrhea treatment 181, 182
micronutrient supplementation 266, 267

Phosphorus
bone effects
linear growth relationship 160
mineralization studies 160–163
overview 159, 160
deficiency, rickets 32, 33

Phytic acid
calcium absorption effects 27, 33, 34
iron absorption effects 87, 88, 90
zinc absorption effects 38, 50, 87, 88, 90

Pneumonia, zinc deficiency/supplementation effects 42, 48, 49
Policy, micronutrient deficiency eradication
barriers 261, 262
global commitment 258
overview 256
relapse, goiter 258
Polyphenols, iron absorption effects 88, 89
Probiotics supplementation, infection 185
Protein-energy malnutrition
definition 107
zinc deficiency 39
Retinol-binding protein (RBP), endotoxin effects 176
Riboflavin-iron interactions 74
Rice
genetic engineering 116, 117
price relationship, undernutrition 110, 111, 114, 115
Rickets
calcium deficiency 26, 27, 34
phosphorus deficiency 32, 33
treatment 168, 170, 171
vitamin D deficiency 29–32, 156
Selenium
deficiency
biomarkers 52
developed countries 45
developing countries 44, 45
food composition 43, 44
immune function studies 151
recommended dietary intake 44
Shigellosis, micronutrient losses 177
Social mobilization, micronutrient deficiency eradication
advocacy 258
overview 251, 256, 257
Sprinkles
acceptability 238, 246, 247
advantages 237
controls, studies 248
costs 244, 245, 247, 248
delivery 237, 246
Ghana trials 237, 238, 240
government approval 242
iron
bioavailability 239

272
Subject Index

deficiency anemia treatment 240
formulation 237, 243
Mongolia study 238, 239
Thailand study 247
Stable isotopes, see Isotope
micronutrient research
Sunlight exposure
infants 267
vitamin D metabolism 21, 22, 155
Tannins, iron absorption effects 88, 89
Technology, micronutrient deficiency eradication
biofortified foods 253, 261
communications 261
fortified foods for all 252
home supplements 252
multiple micronutrient interventions 252
overview 251, 252
rapid assessment techniques 253
special needs 252
supplement assimilation 254
Undernutrition
causes 108, 109
definitions 108
rice price relationship 110, 111, 114, 115
UNGA Special Summit for Children, goals 251
United Nations Millenium Declaration 105
Urbanization, micronutrient deficiency implications 260
Vegetarians, vitamin D deficiency, breast-fed infants 266
Vitamin A
bioavailability, weaning period 91
deficiency
disease association 40
epidemiology, iodine/iron deficiencies 2, 4, 5, 15, 17
micronutrient studies, history 250
scoring 37, 38, 150
immune function studies
controlled studies 142, 143
deficiency effects 140, 141
historical perspective 138
prospects, study 146, 147
supplementation effects 141
infectious disease, supplementation recommendations 178, 179
Vitamin A-iron interactions
interventions 8
iron absorption 6, 7
iron metabolism 3, 6
overview 72, 73
Vitamin A-zinc interactions 73
Vitamin D
bioavailability, weaning period 91
bone effects
linear growth relationship 156, 157, 164
mineralization studies 157–159
overview 155, 156
breast milk content
adequacy 23, 32, 156
vegetarian mothers 266
cutaneous synthesis, factors affecting 22, 23, 32
deficiency
epidemiology 24, 25
infants/young children 24
rickets 29–32, 156
dietary sources, infants/young children 23
