Subject Index

N-Acetylcysteine
bioavailability 15, 16
intensive care use 84
systemic inflammatory response syndrome trials 125
N-acetylglucosamine, inflammatory bowel disease therapy 57, 58
Acute phase proteins
acute phase lipoproteins 101, 102
benefits of acute phase response 84, 85
nutritional manipulation of acute phase response 215, 216
types and functions 3
Acute respiratory distress syndrome, intensive care nutrition 206
Aging
body composition assessment 248
protein exercise and metabolism 115–118
insulin resistance effects 106, 115, 116
intake requirements 107–109
metabolism changes 104–107
pulse feeding 115–117
retention improvement by modifying intake pattern and rate of digestion 109–112
vitamin/trace element supplementation effects on infection susceptibility 137, 147
AIDS, see Human immunodeficiency virus
Air displacement plethysmography, body composition assessment 243, 244
Albumin, serum levels in inflammation 3, 17
Anthropometry, body composition assessment 245, 251
Appetite, cytokine regulation 3
Arachidonic acid
eicosanoid synthesis 21, 23, 24
n-3 polyunsaturated fatty acid effects on metabolism 23, 28
Arginine
inflammation modulation 9, 15
intensive care unit use 216, 217
Bioimpedance analysis, body composition assessment 244, 245, 252
Body composition applications
aging 248
disease monitoring 248, 249
energy requirement establishment 246
growth and development 246–248
assessment
air displacement plethysmography 243, 244
anthropometry 245, 251

Subject Index

Hydrometry, body composition assessment 243
Hypercholesterolemia, maternal nutrition influences 281, 297
Hypertension, maternal nutrition influences 281

Immunonutrient formulations, see Intensive care unit

IMPACT, systemic inflammatory response syndrome trials 31

Inflammation
adhesion molecules
    cell migration 19
n-3 polyunsaturated fatty acid effects 25, 26, 28

cytokine modulation
    anti-inflammatory cytokines as prognostic indicators 5, 6
    overlapping functions 16
overview 1
pro-inflammatory cytokines
    body temperature regulation 3
cascade 119
damaging effects 5, 6, 8
genotype effects on production 6, 7, 11, 12
human immunodeficiency virus 13, 14
metabolic effects 2–4
n-3 polyunsaturated fatty acid dietary effects 24–28
neutralization studies 21
oxidative stress 4, 7, 8
suppression 4, 5
types 20
gut, see Inflammatory bowel disease immunonutrient modulation arginine 9, 15
efficacy improvement 11
 glutamine 9, 15, 16
n-3 polyunsaturated fatty acids and variability of response 9, 10
targets 9
mast cell role 13
nutritional intervention research prospects 301, 302
overview of response 1, 19, 20
systemic, see Systemic inflammatory response syndrome
T-cell suppression 8

Insulin resistance
    chromium and glucose metabolism 135
glycemia control in intensive care unit 168
maternal nutrition influences 281, 297
protein metabolism effects in aging 106, 115, 116

Insulin-like growth factor
    gut adaptation role 173

Intensive care unit, see also specific conditions
N-acetylcysteine use 84
course of inflammation and organ failure 203
early timing of nutritional support
animal studies 154, 156
definitions 152, 154
enteral nutrition absorption tests 159, 161, 162
access 164, 167

antioxidant status 48–51, 83
butyrate enema therapy 55, 62
β-casein avoidance 55
dietary particles in immune response 58
enteral nutrition trials 265
fiber effects 64
nutritional intervention
    Crohn’s disease model 42, 43
