Subject Index

Note: Page numbers followed by “f” indicate figures; those followed by “t” indicate tables.

A
Abdominal obesity, 369
Acquired immunodeficiency syndrome (AIDS).
   See Human immunodeficiency virus (HIV)
Activity level, stunting and, 247
Adaptation design, 376
Adiposity rebound, 64–65
Adolescent catchup growth, 262–264, 263f, 264f
   prepubertal stunting with, 263–264, 264f
   prepubertal stunting without, 264–269, 265f–269f
Adolescent growth
   ethnic differences in, 7–10, 8f–10f
   international growth references for, 10–11
Adolescent pregnancy, birthweight with, 102
Adoption
   and linear growth retardation, 248–249
   prepubertal catchup growth with, 261–262, 261f, 347
Adult literacy rate
   female, and stunting, 89, 95
   in Latin America, 306, 306t
   in Sub-Saharan Africa, 313
Africa
   adult literacy rate in, 313
   growth of school-age children in, 266–268, 267f–269f
   malnutrition in, 397, 398
   orphans in, 396–397
   overweight and obesity in
      by gross national product, 362f
      percentage of, 355, 355f, 356t, 359f, 360t
      social factors and, 364t
   stunting and, 363f
   stunting in
      age trends in, 133, 134f
      numbers of children affected by, 88, 88t
      percentage of, 87, 87t, 356c, 357
      in urban vs. rural areas, 125–126, 125f, 131t–132t, 133–134, 134t
      wasting and, 128
   wasting in, 126, 127f, 128, 137, 138f
   weight for age and infant mortality in, 227f
   African-origin populations
   prepubertal growth in, 4, 5f
   pubertal growth in, 8–9, 8f, 9f
Age
   maternal, and birthweight, 240
   overweight by, 355, 355f
   Age at peak height velocity, ethnic differences in, 8–9, 8f–10f, 19
   Age trends, in growth faltering
      linear growth retardation and stunting,
      129–136, 130f, 131t–132t, 134f–136f, 155–156
      summary of findings on, 137–141, 150–151
   weight-for-height and wasting, 137, 138f, 139f
AIDS. See Human immunodeficiency virus (HIV)
Air pollution
   and intrauterine growth retardation, 101–102
   in transitional societies, 317
Albumin, serum, with breast-feeding vs. reduced-protein formula, 79–80, 80t
Albuterol, and growth of school-age children, 271t
Alli Alimentu, 290–291
Altitude, and birthweight, 239–240
Amino acid composition, of breast milk vs.
   formula, 76, 77, 77t
Anemia
   and cognition, 256
   infection and, 210, 211
Animal foods
   in Latin American diet, 308–310, 309f
   in transitional societies, 319
Antihelmintic treatment, 220
   and growth of school-age children, 271, 271t, 272, 272t
Arginine, in formula, 77, 77t
Arm length, 157
Ascariasis, and nutrition, 209, 210
Asia
   stunting in
      number of children affected by, 88, 88t
      prevalence of, 87, 87t
   in urban vs. rural areas, 125, 125f, 126, 132t, 135–136, 135f
   wasting and, 128
Asia (contd.)
  wasting in, 126, 127f, 128, 137, 139f
  weight for age and infant mortality in,
    226–229, 227f, 235–236
  “Asian enigma,” 128–129
Asian paradox, 226–229, 235–236
Asiatic populations
  prepubertal growth in, 4, 5f, 6–7, 7f
  pubertal growth in, 8–9, 8f, 9f, 10
  soya consumption and puberty in, 16
Atherosclerosis risk, birthweight and, 334, 348
Atole, 148–149, 149f, 155, 156, 285, 290, 381

B
Baby-friendly hospital initiative, 316
Bangladesh
  efficacy study of dietary intake in, 379, 380t, 381
  low birthweight and infant mortality in, 229
  overweight and obesity in, 356f, 364t, 369
  stunting in, 132t, 135, 135f, 356t
  wasting in, 127, 127f, 137, 139f
Bangladesh Integrated Nutrition Project, 113
Bayley Behavior Record, height and, 247
Behavior, linear growth retardation and,
  247–248
Behavioral issue, obesity as, 372, 397
Benin
  overweight and obesity in, 355f, 356t, 364t
  stunting in, 356t
  wasting in, 126, 127f, 137
  weight-for-height in, 137
Bienestarina, 290, 291
Birthweight
  and adult body mass index, 341–342
  vs. alternative measures, 339
  altitude and, 239–240
  and atherosclerosis risk, 334–335, 348
  and blood pressure, 334, 341
  and coronary heart disease mortality, 334
  and diabetes, 335
  for gestational age
    and intrauterine growth retardation, 97
    and perinatal mortality, 231–234, 233t,
      236–238
  low
    and child malnutrition, 399
    growth reference for, 25–27, 26f, 34
    and infant mortality, 223–240
    and intrauterine growth retardation, 97–98
    “low-risk” vs. “high-risk” causes of,
      224–226, 228f, 229, 231, 235, 236, 239
    and neonatal mortality, 231, 232f
maternal age and, 240
nutrition and, 103–114
  interventions for, 104–105, 110–114,
    119–121
  macronutrients in, 105–106
  micronutrients in, 106–110, 106t, 107f, 109f
  minerals in, 106t, 108–110, 109f, 111–112
  preconceptional, 103–105
  during pregnancy, 105–114
  in South Asia, 313–314
  vitamins in, 106–108, 106t, 107f, 111–112
  and obesity, 335, 342
  in programming hypothesis, 336–337
  sociodemographic and genetic factors
    affecting, 102–103
Blood pressure, birthweight and, 334, 341–342
Body mass index (BMI)
  at 1 month, as predictor of obesity, 60–61, 61f
  adult, birthweight and, 341–342
  for age, in growth reference, 29, 34
  with breast-feeding, 71
  vs. reduced-protein formula, 79, 79t, 81
  as indicator of obesity, 71, 369, 370–371
  maternal
    and intrauterine growth retardation,
      103–104
    as predictor of obesity, 63
  NHANES I standards for, 272, 272t
Bolivia
  linear growth retardation and stunting in, 129,
    131t, 356t
  overweight and obesity in, 356t, 360t, 361t,
    364t
Bone modeling, infection and, 212
Brazil
  linear growth retardation and stunting in, 129,
    130, 130f, 131t, 356t
  overweight and obesity in, 356t, 360t, 361f,
    364t
Breast-feeding
  and body mass index, 71
  and cytokines, 51–52
  in Euro-Growth study, 55–58, 56f, 57f
  duration of, 58–60, 58t, 59f, 59t
  and growth, 37–52
    assessment of adequacy of, 44–45
    with complementary feeding, 42–43, 51
    discussion on, 49–52
    duration of, 41–43
    in first year, 37–41, 38f–40f, 40t, 47
    linear, 51
    long-term, 43, 50
mechanisms to explain, 44
policy implications of, 47
protocol for studying, 50–51
research recommendations on, 45–47
in transitional societies, 315–316, 315t, 316t
and growth reference, 25, 37–41, 38f–40f, 40t, 45, 46–47, 49–50, 52
during infection, 209
and obesity and overweight, 43, 44, 45–46, 47, 64–65, 67–72, 365
programming research on, 340
protein intake from, 44, 50, 72, 74–75, 75t, 81
socioeconomic status and, 49–50, 52
in transitional societies, 315–316, 315t, 316t, 330
WHO recommendations on, 53
Breast milk
growth factors in, 44, 51
hormones in, 44
and obesity, 71–72
protein content of, 73–74
Burkina Faso
effectiveness studies of complementary
feeding in, 383t, 389t
stunting, overweight, and obesity in, 355f, 356t, 364t
weight-for-height and wasting in, 137
Burundi, stunting, obesity, and overweight in,
355f, 356t, 364t
Caribbean
overweight and obesity in, 356t, 359f, 360t, 362f, 364t
stunting in, 87, 87t, 88, 88t, 356t
Catchup growth
late, 262–264, 263f, 264f
prepubertal stunting with, 263–264, 264f
prepubertal stunting without, 264–269, 265f–269f
prepubertal, 261–262, 261f, 347
Cebu study, 340, 347–348, 350
Centers for Disease Control and Prevention
(CDC), growth reference of, 21, 22, 23
Central African Republic, stunting, overweight, and obesity in, 355f, 356t, 364t
Central America. See also Latin America
stunting in, 87, 87t, 88, 88t, 89–90, 90f, 92
weight for age and infant mortality in, 227f
Chad
stunting, overweight, and obesity in, 355f, 356t, 364t
wasting in, 126, 127, 127f
Child development, model of, 310, 311t
Child growth. See also School-age children
breast-feeding and, 315–317, 315t, 316t
care of women and children and, 313
gender issues and, 313–314
household food security and, 311–312, 312f
old and new conditioning factors of, 310–317
women’s work and, 314
Child mortality, weight for age and, 229–231, 230f
Child size
and child mortality, 229–231, 230f, 235–236
variance in, 235
Chile
breast-feeding in, 315–316, 315t, 316t
complementary feeding in, 300–301
fortification of staple foods in, 324
micronutrients in, 331
nutritional interventions in, 320–324, 321t, 328–329
nutrition transition in, 306f, 307–308, 307t, 310t
obesity in, 329
poverty and indigence in, 312, 312f
sanitation in, 329
Chilean Nutrition Foundation (CONIN), 323
China
growth of school-age children in, 279
obesity and overweight in, 369
Chlamydia trachomatis, and low birthweight, 100

C
Calcium
in complementary diet, 161t, 162f, 163t, 165t–168t, 172t–173t
direct role in linear growth of, 174–175
and intrauterine growth retardation, 101, 106t, 108
Calcium deficiency, and zinc deficiency,
195–196
Cameroon
effectiveness studies of complementary
feeding in, 383t, 386t, 390t
stunting, overweight, and obesity in, 355f, 356t, 364t
Carbohydrate, in complementary diet,
165t–168t, 172t–173t
Carbon monoxide, and intrauterine growth retardation, 101
Care-giving behaviors, and child growth, 313
Caretaker education, and childhood
malnutrition, 397
Cholesterol, birthweight and, 334, 348
Cigarette smoking
  and intrauterine growth retardation, 101
  in transitional societies, 317–319, 329
CIS (Composite Infant Scale), height and, 241–242
Cognition, linear growth retardation and cross-sectional associations between, 241–243
  longitudinal studies of, 243–246, 244f, 245t
  reversibility of effects of, 248–251, 254–256
Colombia
  efficacy study of dietary intake in, 379, 380t, 381
  linear growth retardation and stunting in, 129, 130, 131t, 356t
  overweight and obesity in, 356t, 360t, 361f, 364t
  processed complementary foods in, 290
Colombiabiharina, 290, 291
Communication strategies, in nutritional interventions, 383t–384t, 384–385
Comoros, stunting, overweight, and obesity in, 355f, 356t, 364t
Complementary feeding
  effectiveness studies of, 382–391, 383t–384t, 386t–387t, 389t–391t, 392–393
  efficacy studies of, 379–382, 380t, 391
  in Euro-Growth study, 58t, 59–60, 59f, 65
  and growth, 42–43, 51
  inadequacy of, 282–283
  linear growth failure during, 159–196
  multiple micronutrient supplements with, 181–183, 193–196
Complementary food
  fortificants in, 183–185, 193–196
  growth-limiting nutrients in
    adequacy of, 160–164, 161t, 162f, 163t, 165t–168t
    with direct role in linear growth, 169–177, 172t–173t
    discussion of, 192–196
    future research on, 185–186
    with indirect role in linear growth, 177–180
  household and recipe trials of, 385, 386t–387t
  micronutrient-rich, 183–185, 193–196
  processed, 281–303
    advantages of, 283–284
  communication strategy for, 285–286
  contamination of, 289
  development and marketing of, 300–301
  discussion of, 299–303
  effect on growth of, 284–285
  in Latin America, 290–296, 294t
  liquid, 289, 301
  in Mexican Progressa, 292–296, 294t
  and micronutrient needs, 286–287
  optimal characteristics of, 284, 287–288
  recommended research activities on, 297–298
  risks associated with use of, 289–290
  role of governments in, 288, 301, 302
  role of private industry in, 288–289
  sustainability of programs of, 289, 302
  timing of introduction of, 289, 299–300
  for very poor, 288–289
  quantity and quality of, 180–185
Composite Infant Scale (CIS), height and, 241–242
CONIN (Chilean Nutrition Foundation), 323
Constitutional smallness hypothesis, 229, 235–236
Copper
  in complementary diet, 162f, 165t–168t
  and intrauterine growth retardation, 106t
Coronary heart disease mortality, birthweight and, 334
Corticotropin-releasing hormone, and
  intrauterine growth retardation, 121
Costa Rica, stunting in, 89, 90f
Cote d’Ivoire, stunting, overweight, and obesity in, 355f, 356t, 364t
Coverage rates, in nutritional interventions, 385, 389t–390t
Cryptosporidiosis, and growth, 206–208
Curve fitting, for growth reference, 30, 33–34
Cytokines
  breast-feeding and, 51–52
  infection and, 211, 212

D
Demographic Health Surveys (DHSs), 94, 123–124
Developing countries
  growth failure in
    age patterns of, 129–141, 130f, 131t–132t, 134f–136f, 138f, 139f, 150–151
    during complementary feeding, 159–196
    discussion of, 150–152, 153–157
    geographical differences in, 124–129, 125f, 127f, 150
    levels and trends in, 85–90, 87t, 88t, 90f, 91–96
    intrauterine growth retardation in
      case study of, 141–150, 144t, 145f, 146t, 147f, 148f
prevalence and patterns of, 97–98
reliability of estimates of, 98
nutrition transition in. See Transitional societies
obesity in, 351–373
by age, 355, 355f
discussion of, 362–367, 368–373
gross national product and, 361, 362f, 363f
levels of, 355–357, 356t, 358f, 359f
methodology of studying, 353–354
social factors and, 361–362, 364t
surveys of, 352, 353
trends in, 357, 360t, 361f
Developmental levels, height and
cross-sectional studies of, 241–243
longitudinal studies of, 243–246, 244f, 245t
reversibility of effects of, 248–251, 254–256
Developmental quotient (DQ), linear growth retardation and, 242, 244, 244f
Deworming
and growth of school-age children, 271, 271t, 272, 272t
in infants, 220
DHSs (Demographic Health Surveys), 94, 123–124
Diabetes, birthweight and, 335
Diarrhea
and growth, 198–202, 199t–201t, 203t
and nutrition, 209, 210
prevention of, 220–221
and stunting, 94, 95–96
Dietary diversity, and obesity, 372
Dietary fiber, in complementary diet, 165t–168t, 172t–173t
Dietary intake. See also Nutrition
and energy sufficiency, 273–274, 273t
infection and, 209
Dietary patterns, in Latin America, 307–310, 309f, 310t, 319
Dominican Republic
effectiveness studies of complementary feeding in, 383t, 389t, 391t
linear growth retardation and stunting in, 129, 130, 131t, 356t, 364t
overweight and obesity in, 356t, 360t, 361f
weight-for-height and wasting in, 136f
DQ (developmental quotient), linear growth retardation and, 242, 244, 244f

E
East Asia, stunting, overweight, and obesity in, 356t, 359f, 363f, 364t
Eastern Europe, stunting, overweight, and obesity in, 356t, 364t
Eating disorders, obesity and, 397
"Eating down," 114
Economic growth, and stunting, 89, 92, 95
Education, maternal
and childhood malnutrition, 397
and overweight, 361–362, 364t, 369
in transitional societies, 329
Educational strategies, in nutritional interventions, 383t–384t, 384
Effectiveness studies, 382–391, 383t–384t, 386t–387t, 389t–391t, 392–393
Efficacy studies, 379–382, 380t, 391
Egypt
obesity in, 400
stunting, overweight, and obesity in, 356t, 360t, 364t
El Salvador, stunting, overweight, and obesity in, 356t, 360t, 361f, 364t
Empirical percentile approach, to curve fitting, 30
Energy availability
in Latin America, 308
and stunting, 89, 95
Energy balance, and obesity, 371
Energy expenditure, infection and, 210
Energy intake
in complementary diet, 163t, 165t–166t, 172t–173t
with protein-reduced formula, 78, 78t
Energy/protein supplementation, stunting at birth and response to, 148–150, 148f, 149f, 151–152, 153, 155
Energy sufficiency, in school-age children, 272–273
Enterogastric Escherichia coli
growth, 208
and nutrition, 210
Enteropathy, and stunting, 95–96
Environment, and intrauterine growth retardation, 101–102
Environmental pollution, in transitional societies, 317–319
Escherichia coli, enterogastric
growth, 208
and nutrition, 210
Ethnic differences
in age at peak height velocity, 19
geneic mapping of, 18
in growth reference, 24–25, 24t
in maximal growth, 20
in stature, 1–20
classification of populations for, 2–3, 3t
discussion of, 15–20
Ethnic differences, in stature (contd.)
prepubertal, 4–7, 5f–7f
pubertal, 7–10, 8f–10f
in weight/height ratio, 19
Euro-Growth references, 61–62
Euro-Growth study, 54–62
breast-feeding in, 55–58, 56f, 57t
duration of, 58–60, 58t, 59f, 59t
design of, 54–55, 55t
discussion of, 63–66
introduction of solids in, 58t, 59–60, 59f, 65
length differences in, 55–57, 56f, 57t
midparental height in, 58–59, 58t, 59t
obesity in, 60–61, 61t
objectives of, 54
parents’ influence on, 65–66
weight and length differences in, 55–58, 56f, 57t
EURONUT, 54
European-origin populations
ethnic grouping of, 15–16
prepubertal growth in, 4, 5f, 6, 6f, 16
pubertal growth in, 8–10, 8f–10f
Evidence, types of, 375–378, 377t
Exposure rates, in nutritional interventions, 385, 389t–390t

F
Factorial method, for calculating protein requirements, 75
Fat, in complementary diet, 165t–168t, 172t–173t
Fat consumption
in programming hypothesis, 350
in transitional societies, 319
Fat energy
in Latin America, 308, 309f
and obesity, 372–373
Fat patterning, birthweight and, 335
Female literacy, and stunting, 89, 95
Femur length, 157
Ferrous sulfate, and growth of school-age children, 271t
Fetal responses, to undernutrition and stress, 338t
Fiber
in complementary diet, 165t–168t, 172t–173t
