Africa
obesity
community-based interventions 247
fatality rate of diseases 39
genetic predisposition to diseases 38, 39
undernutrition coexistence in households 39
women and cultural acceptability 37, 38
overweight epidemiology 34–36
underweight epidemiology 34–36

Brazil
obesity
community-based interventions 247
rates 11
slum conditions 97–99

Breastfeeding
extremely low birthweight infants
advantages of human milk 197
analysis of milk 198–200, 205
cytomegalovirus infection risks 205, 206
fortification
individualized fortification 200–202
semiquantitative fortification 200
standardized fortification 200
macronutrient variation 198
milk features of mothers 198
low birth weight community-based interventions 242
undernutrition studies 80, 81

Caloric restriction (CR)
Biosphere 2 study 141
insulin sensitivity effects 140
intermittent effects 149
life span studies 138–140, 143, 144
oxidative stress reduction 139, 140
physical activity interactions 148
randomized controlled trials 141–143

Aging
caloric restriction and life span 138–140, 143, 144
flavonoids and life extension 147, 148
obesity role 138
telomere shortening 150
Agouti, epigenetics 110, 185
Applied Nutrition Project (ANP) 247
Atherosclerosis, obesity and inflammation 162
AXIN1, epigenetics 114

Bangladesh Integrated Nutrition Project (BINP) 249
Body composition, malnutrition recovery effects 100, 102
Bone mineral content (BMC), malnutrition recovery effects 103
Subject Index

Chile, obesity community-based interventions 248

China
- chronic disease burden 26
- economic development 26
- growth status of children 26, 27, 29
- malnutrition improvements 25, 28
- micronutrient status of children 28, 30, 31, 44
- obesity trends 25, 26, 28, 30
- television growth 9, 14
- trends in diet and physical activity 3, 14

Community Food and Nutrition Program (CFNP) 247

Complementary feeding
- low birth weight community-based interventions 243
- undernutrition studies
  - food quality versus quantity effects 82, 83
  - timing effects 81, 82

Cortisol, stress and malnutrition 106–108

Developmental origins of health and disease (DOHaD) 187

Diabetes type 2
- Brazilian slum risks 99, 101
- caloric restriction and insulin sensitivity effects 140
- developmental origins of health and disease 187
- early life factors
  - birth weight 190, 191
  - fetal programming 180, 185–187
  - maternal diabetes 179, 180
  - maternal nutrition 180, 183, 184
  - overview 178
  - rapid growth effects 180–183, 191, 194
- epigenetics 185
- incidence
  - Caucasians 54
  - developing countries 179
  - life-course model 187
  - life-cycle prevention 188
  - pathogenesis 178, 179
- DNA methylation, see Epigenetics

Epigenetics
- diabetes 185
- fetal hypoxia effects 132, 133
- human diseases 114, 115
- intrauterine growth restriction 122
- mapping 118
- metastable epiallele identification
  - 113, 114
- mouse studies
  - metastable epialleles 110, 111
  - transgenerational epigenetic inheritance 111, 112
- overview 109, 110
- sheep studies of periconceptional nutrition 119
- transgenerational inheritance in humans 112, 113, 118

Expanded School and Community Food and Nutrition Surveillance and Education Program (SEE CALINE) 247

Extremely low birthweight (ELBW) breastfeeding
- advantages of human milk 197
- analysis of milk 198–200, 205
- cytomegalovirus infection risks 205, 206
- fortification
  - individualized fortification 200–202
  - semiquantitative fortification 200
  - standardized fortification 200
- macronutrient variation 198
- milk features of mothers 198
- complications 206
- computerized calculations of nutrition 201
- feeding systems
  - enteral nutrition 197
  - parenteral nutrition 196, 197, 206
- growth rates 201
- nutritional status evaluation 201–203
- outcomes 195, 196

Fetal growth restriction, see Intrauterine growth restriction

Folic acid
- low birth weight community-based interventions 235
- supplementation 192, 193
- vitamin B₁₂ interactions 192, 193

Food prices, nutrition impact 93

FTO, polymorphisms 50, 51, 259
Globalization, undernutrition studies 89
Growth
Chinese children 26, 27, 29
common childhood illness effects 83, 84
diabetes and rapid growth effects 180–183, 191, 194
genetics 106
malnutrition recovery effects 99, 100, 105
