Subject Index

Acquired human immunodeficiency syndrome (AIDS), mineral supplementation studies 176
Adiponectin
diabetic levels 79
tumor necrosis factor alpha antagonism 30, 31
Age-related macular degeneration (AMD)
oxidative stress 178
supplementation studies 178
Akt, cytokine-induced insulin resistance mediation 144
Albumin
ascites management 223
extracellular water content 208
expansion and hypoalbuminemia 213, 215
metabolism and sodium balance, malnutrition 220
postsurgical hypoalbuminemia mechanisms 223, 224
refeeding, hypoalbuminemia from water and sodium retention 217, 218
serum decrease, salt and water excess 190, 191, 202, 203, 222, 223
transcapillary escape rate 224
Amyloid polypeptide (IAPP), diabetes type 2, role 49
Antidiuretic hormone (ADH)
derangements, obesity 201
extracellular water osmolarity control 209
fluid and electrolyte infusion response 187, 188
thirst regulation, water balance 209, 210
Arachidonic acid
conjugated linoleic acid effects on metabolism 133, 134
trans polyunsaturated fatty acid effects on metabolism 128–131
Aspirin, thrombosis risk reduction 86
Atkins’ diet, see High-fat diet
ATP production, catabolic states 115
Bariatric surgery, diabetes risk reduction 99, 100
Beta blockers, protein-wasting prevention 114
Betacell, inducible nitric oxide synthase 147
Bioinformatics, overview and nutrition applications 248, 249
Body mass index (BMI), fat content and diabetes risk relationship 95, 96
Brain-derived neurotrophic factor (BDNF), stress response 27, 28
Subject Index

Calcium
  blood pressure effects 157, 158
  cancer prevention 177
  osteoporosis prevention 171–173, 184, 185
Cancer, nutrient supplementation studies 177, 184
Cataract
  oxidative stress 178
  trace element supplementation studies 178
Cholecystokinin (CCK), appetite regulation 22
Clinical trials, adequacy in nutrition research 241
Compliance, diets 263
Conjugated linoleic acid (CLA)
  arachidonic acid metabolism effects 133, 134
  body weight reduction 137, 138
  cooking process, production 138
  dose response 138
  metabolism 131–133, 139
  pomegranate, content 139
Copper
  osteoporosis prevention 172, 173
  supplementation, AIDS 176
Corticotropin-releasing factor (CRF), antagonism 32
Cortisol
  lipolytic response 79
  protein wasting, role 113, 114
Diabetes mellitus type 2
  generational induction, rats 13
  genetic factors 19
  gestational diabetes, effects on offspring later in life 15, 16
  high-fat diet, animal studies 17
  inducible nitric oxide synthase inhibition, therapy 147, 148, 152
  role 146, 147
  inflammatory cytokines, obesity-linked diabetes 142, 143
  inflammatory mediators 24, 30, 31
  knockout mouse models 233
  obesity, pathophysiology 78–80
  projections, incidence 37
  risk identification 88, 89
  twin studies, dietary effects 13
  weight reduction, impact on risk
  bariatric surgery 99, 100
  benefits 83, 84
  diet and exercise 98, 99
  pharmacological intervention 100, 101
  westernization influences, developing countries 13
Dietary Approaches to Stop Hypertension (DASH) studies 159–162, 165
Disability-adjusted life years (DALYs), burden of disease and regional risk factors, childhood malnutrition 5, 6
DNA microarray, see also Genomics
  interpretation and analysis 238
  principles 231
Dutch famine, impact on obesity 14
Dyslipidemia
  insulin therapy benefits 71, 72
  liver function effects 80
  management 84, 85
  obese individuals 80
Electrolytes, see Fluid and electrolyte balance
Euglycemic insulin clamp, insulin sensitivity measurement 40
Exercise
  behavioral modification 105, 106
  diabetes prevention 93, 94, 98, 99
  fatty acid oxidation 94, 95
  prescription 101–104, 107
  public health policy 105–108
  weight loss mechanisms 94
Fasting plasma insulin concentration, insulin sensitivity measurement 40
Fatty acids, see also Conjugated linoleic acid; Trans fatty acids
  isomer occurrences and structures 125, 126
  metabolism, insulin resistance 79, 80
  oxidation, exercise 94, 95
  oxidation gene knockouts, mice 233
Fibrates, dyslipidemia management benefits 85
Fish oil
  blood pressure effects 158, 167
  supplementation effects on neuroendocrine and metabolic responses to stress 27, 28, 30
Fluid and electrolyte balance
consequences of salt and water excess
acidosis 190
acute intestinal failure 193
hyperchloremia 189, 193, 201, 203
management of overload 192, 194
nurse education 201
oliguria 189, 190
pulmonary edema 191
serum albumin decrease 190, 191, 202, 203
weight gain 190, 191
distribution and exchangeable
fractions, body electrolytes 206, 207
electrolyte content, gastrointestinal
secretions 195, 196
endocrine responses to crystalloid
infusions
antidiuretic hormone 187, 188
renin-angiotensin system 188, 189
enteral feeding, fluid therapy 200
insulin effects, critical care 58–60
maintenance requirements, fluid
therapy 194–196, 199, 200
refeeding, water and electrolyte
metabolism
anabolic response, intracellular
cation shift 215, 217
hypoalbuminemia from water and
sodium retention 217, 218
total parenteral nutrition before
surgery 221
renal failure 199, 201
Folate, supplementation studies 13, 14
Frequently sampled intravenous glucose
tolerance test (FSIVGTT), insulin
sensitivity measurement 38, 39

Genomics, see also DNA microarray
bioinformatics 248, 249
biological hierarchy, global analysis
244, 245
disease prevention studies, nutrition
255–257
environmental factor considerations
242, 253, 254
ethical considerations 240, 241
gene abundance, genome 262
gene expression analysis 246, 247
genetic variability and polymorphisms
247, 248
nutrition, applications 231, 232, 243,
244, 247, 257–259
overview 244–246
prospects 234, 257–259
systems biology initiatives, research
234, 238, 239
Glucagon-like peptide-1 (GLP1), beta
cell function effects 49
Glucose
homeostasis, critical illness 70, 71
insulin effects, liver
glucose production 40–42
glucose uptake 42–44, 47, 48, 50
postprandial monitoring, diabetes
management 48
sodium-sparing effect 210, 222
Glucose intolerance, management 82, 83
Glutathione depletion, critical illness
121, 122
GM3 ganglioside, cytokine-induced
insulin resistance mediation 144
Growth hormone (GH)
resistance induction, insulin therapy
73, 74
therapy, critical illness 67, 72, 73
High-fat diet
animal studies, insulin resistance and
diabetes 17
attrition rates, Atkins' diet 35
long-term outcomes 34, 35
mechanisms of weight loss 33, 34
stress response effects 33
Homeostatic model assessment
(HOMA), insulin sensitivity
measurement 38
Hyperchloremic acidosis
gastric emptying effects 203
salt and water excess induction, fluid
therapy 189, 193, 201, 203
Hypertension
behavioral interventions 165
dietary modification, management
calcium 157, 158
DASH diet studies 159–162, 165
fish oil 158, 167
magnesium 158
multifactorial approaches 159, 160,
162, 163
potassium 157
PREMIER Study 162, 163, 166
protein intake 158, 167
sodium intake 156, 157, 166
Hypertension (continued)
lifestyle factors 155, 156
management and benefits 85
prevalence 155
salt sensitivity 156, 157
Hypoalbuminemia, see Albumin
Inducible nitric oxide synthase (iNOS)
atherosclerosis, role 146
cytokine induction 145, 146
endothelial isof form interactions 151, 152
inhibition, diabetes therapy 147, 148, 152
knockout mouse and infection resistance 151
lipopolysaccharide induction 146
obesity-linked insulin resistance and diabetes, role 146, 147
Inflammation, see also Arachidonic acid
cytokine-induced insulin resistance mediators 143–145
overview 142
markers, metabolic syndrome 24, 25
mental stress, proinflammatory trigger 25, 30
nutritional factors 25
protein wasting and proinflammatory cytokines 112, 113, 121, 123, 124
Injury
endocrine response 54
metabolic response 53, 54
Insulin
hepatic effects
glucose production 40–42
glucose uptake 42–44, 47, 48, 50
muscle actions 44, 45, 66, 79, 120, 121
refeeding syndrome, role 221, 222
signal transduction 143, 144
therapy, critical illness
clinical outcomes, intensive care patients 60, 61
dosing 61
dyslipidemia correction 71, 72
fluid and electrolyte balance, effects 58–60
growth hormone resistance induction 73, 74
hypoglycemia risks 64, 65
myocardial infarction 60, 65, 69
protein metabolism effects 55, 56, 58
Insulin-like growth factor binding protein-1 (IGFBP-1)
elevation, diabetes 70
growth hormone therapy response 73
insulin therapy response 70, 71
mortality marker 70, 71
Insulin resistance
critically ill patients 70
cytokine-induced insulin resistance mediators 143–145
overview 142
definition 37
glycemic index of foods, diabetes prevention 51, 52
inducible nitric oxide synthase, role 146, 147
management
metformin 49, 50, 86
thiazolidinediones 49, 50, 86
measurement, insulin sensitivity
euglycemic insulin clamp 40
fasting plasma insulin concentration 38
frequently sampled intravenous glucose tolerance test 38, 39
homeostatic model assessment 38
insulin suppression test 39, 40
insulin tolerance test 39
oral glucose tolerance test 39
Quantitative Insulin Sensitivity Check Index 38
stress, effects 25, 26, 30
surgical patients 54, 55
therapeutic lifestyle changes, advantages over pharmacotherapy 50, 51
visceral obesity, association 96, 97
Insulin resistance syndrome, see Metabolic syndrome
Iron
cancer risks, overnutrition 177
supplementation, AIDS 176
Knockout mouse
data interpretation 237, 238
nutritional models 233
Leptin
appetite regulation 228, 229
resistance 31, 32
Low birth weight, effects later in life 20
Magnesium, blood pressure effects 158
Malnutrition
disease risk factors, children 5, 6
intergenerational cycle 3, 4
synergistic link between
undernutrition and overnutrition
9–11
United Nations Standing Committee
for Nutrition, conclusions 2, 3
water balance effects, marasmus
versus kwashiorkor 211, 212
Mammalian target of rapamycin
(mTOR), cytokine-induced insulin
resistance mediation 145
Mass spectrometry, metabolomics
251, 252
Mental stress, see Stress
Metabolic syndrome
features 19, 37, 77
inflammation markers 24, 25
intervention benefits 77
management 82, 83
stress in development 21, 22, 25
weight reduction benefits 83, 84
Metabolomics
biological hierarchy, global analysis
244, 245
goals 254, 255
principles and tools 250–252
prospects 234
Metolazone absorption 201
Metformin, diabetes prevention 49, 50, 86
Millenium Goals, development 1, 2
Mitogen-activated protein kinase
(MAPK), cytokine-induced insulin
resistance mediation 145
Muscle, see also Protein
chronic diseases and protein kinetics
117–119
insulin actions 44, 45, 66, 79, 120, 121
physiological regulation, protein
kinetics 111, 112
protein wasting
amino acid profile alterations 114, 115
critical illness 72, 116, 121
hormone regulation 113
hydration state and acid-base
balance 115, 116
ketone body infusion effects 121
proinflammatory cytokines 112, 113, 121, 123, 124
testosterone, prevention 114
thyroid dysfunction 114
tissue perfusion and oxygen
availability 115
Myocardial infarction, insulin therapy,
dabetics 60, 65, 69
Nitric oxide synthase, see Inducible
nitric oxide synthase
Nonalcoholic steatohepatitis (NASH)
inulin resistance association 81
obese individuals 81
Noradrenaline, lipolytic response 79
Nuclear factor-κB (NF-κB), cytokine-
induced insulin resistance mediation
144, 145
Nuclear magnetic resonance (NMR),
metabolomics 250, 251
Obesity, see also Body mass index;
Metabolic syndrome; Overnutrition
behavior change, management 90, 91
diabetes pathophysiology 78–80
Dutch famine, impact 14
economic impact 240
environmental factors 21
genetic factors 19
geographic distribution, overweight
and obesity 7, 9
global disease burden 6–9
health risks 78
nonalcoholic steatohepatitis 81
plasminogen activator inhibitor-1
levels 82
prevalence 78
stress metabolic and hemodynamic
effects 22–24
synergistic link with undernutrition
9–11
visceral obesity and insulin resistance
96, 97
weight reduction benefits 83, 84,
96–101
Oral glucose tolerance test (OGTT),
insulin sensitivity measurement 39
Orlistat, diabetes risk reduction 101
Osteoporosis
fracture risk 171
mineral supplementation studies
171–173, 184, 185
Overnutrition global disease burden
6–9
Subject Index

Parathyroid hormone (PTH), phosphate regulation 172
Phosphate, osteoporosis prevention 172
Physical activity, see Exercise
Physical inactivity, health risks, developing countries 6, 9
Plasminogen activator inhibitor-1 (PAI-1)
levels, obesity 82
regulation of expression 82
thrombosis role 82
Potassium
blood pressure effects 157
distribution and exchangeable fractions 206, 207
fluid and electrolyte therapy 201, 202
Pregnancy
diabetes effects on offspring 15, 16
generational induction of diabetes, rats 13
low birth weight effects, later in life 20
nutritional effects by stage on offspring 14, 15
trans fatty acid studies 136, 137
PREMIER, hypertension study 162, 163, 166
Protein, see also Muscle
blood pressure effects, high-protein diets 158, 167
fish protein amino acid content and insulin action enhancement 151–152
intake recommendations 122, 123
meat versus vegetable effects, child development 16
metabolism effects of insulin therapy 55, 56, 58
Proteomics
biological hierarchy, global analysis 244, 245
nutrition applications 231, 232, 243, 244, 250
principles 231, 232, 249, 250
prospects 234
protein-protein interactions 250
Quantitative Insulin Sensitivity Check Index (QUICKI) 38
Refeeding
insulin role, refeeding syndrome 221, 222
water and electrolyte metabolism
anabolic response, intracellular cation shift 215, 217
hypoalbuminemia from water and sodium retention 217, 218
total parenteral nutrition before surgery 221
Renin-angiotensin system, fluid and electrolyte infusion response 188, 189
Sarcopenia
oxidative stress 123
protein catabolism 123
Selenium
cancer prevention 177, 183
geographic distribution, intake levels 183
immune function
elderly studies 174
overview 173
virulence of infection studies 175, 183
nutritional versus pharmacological effects 182
supplementation, AIDS 176
Sibutramine
diabetes risk reduction 100, 101
obesity management 91, 92
Single nucleotide polymorphisms (SNPs), nutritional significance 248, 253
Sodium
distribution and exchangeable fractions 206, 207
restriction, hypertension management 156, 157, 166
sparing effects of glucose 210, 222
Somatostatin, insulin sensitivity studies 48, 51
Statins, dyslipidemia management benefits 84
Stress
adipose tissue response 32
brain-derived neurotrophic factor response 27, 28
duration of response 32
fish oil effects on neuroendocrine and metabolic responses 27, 28, 30
high-fat diet effects 33
insulin resistance effects 25, 26, 30
mental stress as proinflammatory trigger 25
Subject Index

metabolic and hemodynamic effects 22–24
metabolic syndrome development, role 21, 22, 25
Syndrome X, see Metabolic syndrome
Systems biology
 biological hierarchy, global analysis 244, 245
 initiatives for study 234, 238, 239
 overview 252, 253

Testosterone, protein-wasting prevention 114
Thiazolidinediones
diabetes prevention 49, 50, 86
 side effects 89
Trans fatty acids
 monoethylenic fatty acids
 essential fatty acid metabolism effects 126, 127
 lipoprotein metabolism effects 127
 metabolism 126, 127
 polyunsaturated fatty acids
 arachidonic acid metabolism effects 128–131
 essential fatty acid metabolism effects 128
 lipoprotein metabolism effects 131
 metabolism 128
 methylene-interrupted fatty acids 127
 pregnancy outcomes 136, 137
Tumor necrosis factor-α (TNF-α) adiponectin antagonism
 30, 31
 adipose tissue expression 152
 appetite response 31
 insulin resistance, role 142, 143
 metabolic syndrome levels 24, 25
 protein wasting, role 112, 113, 123, 124

Vagus nerve, central control integration 229, 230
Vasopressin, see Antidiuretic hormone
Vitamin A
 immune function 175
 malaria effects 181
 nutritional versus pharmacological effects 182
Vitamin D, osteoporosis prevention 171–173
Water, see also Fluid and electrolyte balance
 acute pathological condition effects on intracellular water 212
 distribution and compartments 187, 206
 effective circulating volume control 209
 extracellular water expansion and hypoalbuminemia, acute stress 213, 215
 osmolarity control 208, 209
 interstitial space and edema formation 208
 malnutrition effects, marasmus versus kwashiorkor 211, 212
 refeeding, water and electrolyte metabolism
 anabolic response, intracellular cation shift 215, 217
 hypoalbuminemia from water and sodium retention 217, 218
 total parenteral nutrition before surgery 221
 starvation effects 210, 211
 thirst regulation through water balance 209, 210

Zinc
 biomarker utility, nutrition 16, 17
 immune function
 childhood infection studies 174, 175
 elderly studies 174
 overview 173
 malaria effects 181
 nutritional versus pharmacological effects 182
 osteoporosis prevention 172, 173
 supplementation, AIDS 176
